Before We Begin

- Make sure you have Java & Java JDK downloaded on your computer
 - can run **java -version** in terminal to check
- Make sure you have IntelliJ downloaded on your computer
- *Suggested:* Watch previous Java tutorials

Goal: Decode Single Hex Digit

A method that takes in a single hex digit (char) and returns the base ten version of it.

Further Explanation: 'A' = 10, 'B' = 11, and so on. If the given number isn't a part of the hex range return a -1.

Call from main to convince yourself it works.

The End
